Global Colour Management

We Understand Brand Values

We take pride in manufacturing millions of products at sites across the globe to a standard that ensures brand consistency when at the retailer front end.

Managing color to a ISO 12647 – 2 standard we implement our global color management system across all our sites and printing presses across the globe. This unique management system has been implemented of the back of nearly 50 years of printing experience. Multiple investments have made for a industry leading system that ensures color and shade accuracy is a consistent value of any Wilkins Group product across all the global production origins.

Colour Room

- X-Rite SpectroEye & Exact equipment for special colour measurement .
- X-Rite i1 Spectro for Process four colour, quality control.
- Light boxes at all print site. Standardised light sources complying with ISO 3664/2009.
- Xrite Colour iQC software, for special and Pantone colour measurement.
- Colours Passed to CXF Files through Colour iQC.
- Xrite Net profiler software to ensure all Spectro's are reading consistently, globally.
- Mellow Colour Software which allows us to print towards the ISO-12647 Print Standard.
- Training carried out with Print Personnel at each site.
- Colour Champions at all sites. These are responsible for colour control and equipment calibration.

Print Personnel:

Training internal personnel at each region with dedicated print management staff operating a range of colour management equipment.

Highly trained personnel using combined equipment to pass jobs to CXF files and Mellow Colour Reports.

Trained colour champions at all sites around the world.

Do You Believe.....

- ☐ Giving back to the earth, as it sustains us
- ☐ Having a legacy beyond a strong balance sheet
- ☐ Operating with the least possible impact to the ecological environment

If the Answer is YES to the above

you believe as we do!

Raw Material

All of our inks are vegetable and soy based, reducing the reliance on fossil based products. All cartonboard and paper are from sustainable managed forests, including materials certified by the Forest Stewardship Council (FSC)

Energy Saving

The central AC unit is one of the most energy efficient units and the very first to be installed in Sri Lanka. The design of the factory roof and special treatments enables a solar reflective index of 96%.

The factory is illuminated by LED lights

Tree Planting Campaign

As the surrounding environment gave us the land to establish this factory, we have given back with our tree planting campaign. Since the laying of the foundation stone, to date we have planted over 90 trees within the factory premises and will continue this effort when we commemorate a landmark event.

Rain Water Harvesting

The unique design of the factory roof collects over 50,000 litres of rain water annually for sanitation and gardening.

Daylight Harvesting

Daylight harvesting is used by way of transparent panels on the roof which illuminate the entire stores & Canteen area.

Nottingham Packaging Firm Invests 3M USD In State Of The Art Factory in Sri Lanka

Released: 13/10/2015 12:57:00

After 52 years in the packaging industry The Wilkins Group is investing over 3M USD into a brand new state of the art factory on the island of Sri Lanka.

The Wilkins Group bought the land overseas back in 2013, and work began on the two-acre site at the back end of last year, with a grand opening due on October 23rd 2015.

Wilkins Spence Packaging Lanka (Pvt) a subsidiary of 'The Wilkins Group' is situated in Mawaramandiya, and geared to produce packaging solutions for major brands and retailers.

This 40,000 sq ft factory has been built on the principles of green architecture adhering to the Green Building Council Standards for LEED certification.

For the past 15 years, the worldwide retail-packaging firm has developed a team in Sri Lanka with an experienced skill-set in the garment and general packaging industry, up to now the operation has been run from a rented facility in Colombo and is a Sri Lanka Board of Investment Company.

Over the last ten years, The Wilkins Group has become very integrated overseas with manufacturing hubs covering Eastern Europe, Sri Lanka, Bangladesh, India & China with the infrastructure to service many surrounding countries.

Chairman and Managing Director of the Wilkins Group André Wilkins, said: "Having emerged from a three decade long conflict, Sri Lanka is now experiencing a massive resurgence in economic activity on all fronts.

"As major infrastructure projects are put into place, the country is poised to welcome new investors to take economic activity to the next level. This building will house state of the art machinery to produce innovative retail-packaging solutions."

'The Wilkins Group', has one of the largest independent packaging factories in the UK with the group headquarters in Nottingham.

Last year's turnover topped £33M, which is a stark difference from the firm's humble beginnings back in 1963, based on Talbot Street in Nottingham when graphic designer, Ken Wilkins formed the company called Ken Wilkins Design Associates (eventually changed to Ken Wilkins Print Ltd).

Sales and marketing director at The Wilkins Group and Ken Wilkins' grandson, Justin Wilkins, said: "My grandfather was into anything creative, he enjoyed painting portraits and he started the business owning just one drawing board and sharing a room to split the rent with another designer friend.

"My father, André Wilkins joined the business at the age of 18 whilst holding down other part-time jobs. It was his role to promote all of the design and creative services that the business had to offer and with a keen interest in production & manufacturing set about starting a printing operation to produce the designs his father Ken created they both worked hard together for over 35 years until Ken's death in 1993. André is now group chairman & managing director."

In the early days they eventually moved to a large converted house in Nottingham and set about developing the business with a high focus on customer service / reactivity underpinned with innovative creative design.

Justin Wilkins added: "It was a typical British start up with an 'in house' manual screen printing operation and Litho printing press all from a converted house in Nottingham. They spent 25 years serving predominantly the textile market with printed packaging products, before moving to Colwick and purchasing a 5000 sq ft building in a bid to grow. They focused on designing packaging products for the textile industry due to Nottingham's rich textile history."

Progressively developing and extending the site at Private Road No 8 in Colwick to a 60,000 sq ft facility and heavily investing in the latest high speed automated printing and finishing equipment the firm was rapidly establishing its reputation as a 'go to' company for innovation, design and competitive production servicing many major brands and retailers.
